Preliminary Specifications Subject to Change without Notice

DESCRIPTION

JW1985 is an ultra-high-voltage 3-string linear constant-power LED driver with a maximum input voltage of 700V, which is suitable for driving high-voltage low-current LED loads. The application solution has very few external components and compact layout, and can be easily and flexibly applied to various small-size or flat LED products. JW1985 greatly improved the power factor and THD of the system (meeting the IEC61000-3-2 standard). At the same time, the simple linear drive method does not require magnetic components, which can effectively avoid the problem of EMI.

In order to prevent the IC from overheating, the JW1985 integrates temperature control function. When temperature inside chip exceeds T_{OTP}, JW1985 deceases LED current, which can help chip cooling.

Company's Logo is Protected, "JW" and "JOULWATT" are Registered Trademarks of Joulwatt Technology Co., Ltd.

FEATURES

- Excellent line regulation
- Input constant power
- ± 5% output current accuracy
- Multiple ICs can be used in parallel to meet large current output
- High power factor and ultra-low THD
- Very few external components
- Over temperature protection function
- ESOP8 package

APPLICATIONS

- LED Bulb Light
- LED Flood Light
- Other LED Lights

TYPICAL APPLICATION

Note：

1) Exceeding these ratings may damage the device. These stress ratings do not imply function operation of the device at any other conditions beyond those indicated under RECOMMENDE OPERATING CONDITIONS.

2) The JW1985 includes thermal protection that is intended to protect the device in overload conditions. Continuous operation over the specified absolute maximum operating junction temperature may damage the device.

3) The device is not guaranteed to function outside of its operating conditions.

4) Measured on JESD51-7, 4-layer PCB.

PIN DESCRIPTION

Pin ESOP8	Name	Description
1	D2	DRAIN of the Channel 2(CH2)
2	RS	Current sensing pin
3	GND	Chip ground
4	COMP	Constant power adjustment
5	D3	DRAIN of the Channel 3(CH3)
6	NC	Not Connected
7	D2	DRAIN of the Channel 2(CH2)
8	D1	DRAIN of the Channel 1(CH1)
E-PAD	NC	Not Connected

BLOCK DIAGRAM
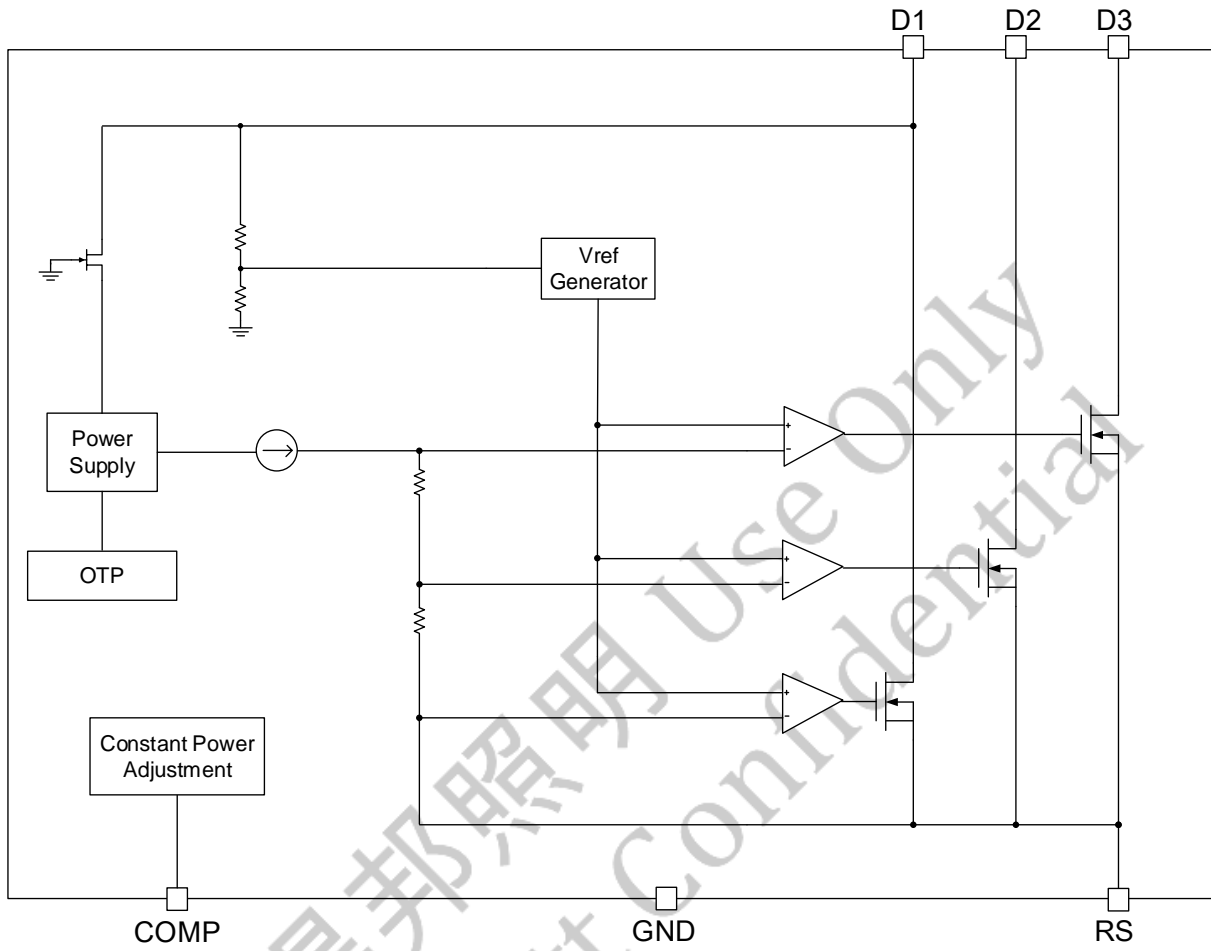

FUNCTIONAL DESCRIPTION

JW1985 is an ultra-high-voltage 3-string linear LED driver for direct line operation.

Theory of Operation

The input is the rectified voltage from AC mains by bridge rectifier. When VIN is higher than the forward voltage of the 1st LED string, JW1985 can detect it and turn on the 1st MOSFET to lighten the 1st LED string. When VIN keeps increasing and exceeds the total forward voltage of the 1st and 2nd LED strings, JW1985 turns on the 2nd MOSFET to lighten the 1st and 2nd LED strings. In the same way, all LED strings are lightened as VIN increases.

During the VIN decrease, JW1985 shuts down the MOSFET as the reverse sequence.

0: no LED turns on
1: 1st LED string turns on
2: 2nd LED string turns on
3: 3rd LED string turns on
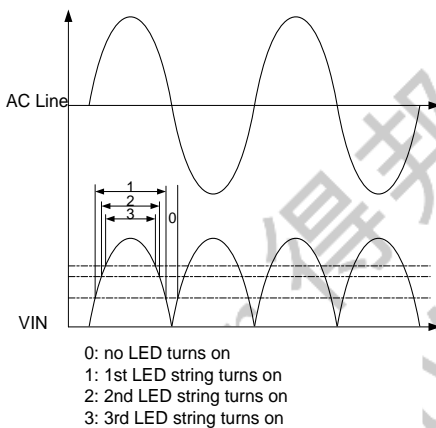

Sine Wave Current Control

The IC introduces BUS voltage into the linear IC to modulate the output LED current waveform, so that the input current has a sinusoidal waveform to achieve high PF value and ultra-low THD, which can meet the IEC6100-3-2 harmonic standard. The VIN voltage waveform and current waveform are shown below.
LED Current Control

JW1985 adopts a mathematical calculation method for the LED current control. The input constant power can be set by COMP pin. Different constant power modes are realized by whether the COMP pin is grounded or not.

When a capacitor about 100nF is connected to the COMP, the reference voltage can be calculated as:

$V_{REF1}(\theta)$

$$\sim \frac{1.6V - 2.25 * \frac{1}{\pi}\int_0^\pi \frac{VD1(\theta)}{200}d(\theta) + \frac{VD1(\theta)}{200}}{2}$$

$V_{REF2}(\theta)$

$$\sim \frac{1.6V + 10uA*1.6K - 2.25*\frac{1}{\pi}\int_0^\pi \frac{VD1(\theta)}{200}d(\theta) + \frac{VD1(\theta)}{200}}{2}$$

$V_{REF3}(\theta)$

$$\sim \frac{1.6V + 10uA*3.2K - 2.25*\frac{1}{\pi}\int_0^\pi \frac{VD1(\theta)}{200}d(\theta) + \frac{VD1(\theta)}{200}}{2}$$

Where

$V_{REFn}(\theta)$ is the reference voltage;
VD1(θ) is Drain voltage of the Channel 1.
When COMP short to GND pin, can be calculated as:

$V_{REF1}(\theta)$

JW1985 Rev.0.1   JoulWatt Proprietary Information. Patent Protected.   **8 / 13**

2022/04/08   Unauthorized Photocopy and Duplication Prohibited.

$$\sim \frac{0.4V - 4*(\frac{VD1(\theta)}{200} - 1.0) + \frac{VD1(\theta)}{200}}{2}$$

V_{REF2}（θ）

$$\sim \frac{0.4V + 10uA*1.6K - 4*(\frac{VD1(\theta)}{200} - 1.0) + \frac{VD1(\theta)}{200}}{2}$$

V_{REF3}（θ）

$$\sim \frac{0.4V + 10uA*3.2K - 4*(\frac{VD1(\theta)}{200} - 1.0) + \frac{VD1(\theta)}{200}}{2}$$

Where

$V_{REFn}(\theta)$ is the reference voltage;

$VD1(\theta)$ is Drain voltage of the Channel 1.

The instantaneous current of LED is calculated as follows:

$$I_{LED}(\theta) = V_{REFn}(\theta)/Rcs$$

Where

$I_{LED}(\theta)$ is the instantaneous current；

$V_{REFn}(\theta)$ is the reference voltage;

R_{CS} is the current sensing resistor connected between RS pin and GND pin.

Over Temperature Protection

JW1985 incorporates a thermal protection mechanism. When the internal junction temperature is higher than T_{OTP}, the internal reference voltage decreases by K_T, and the output current decreases.
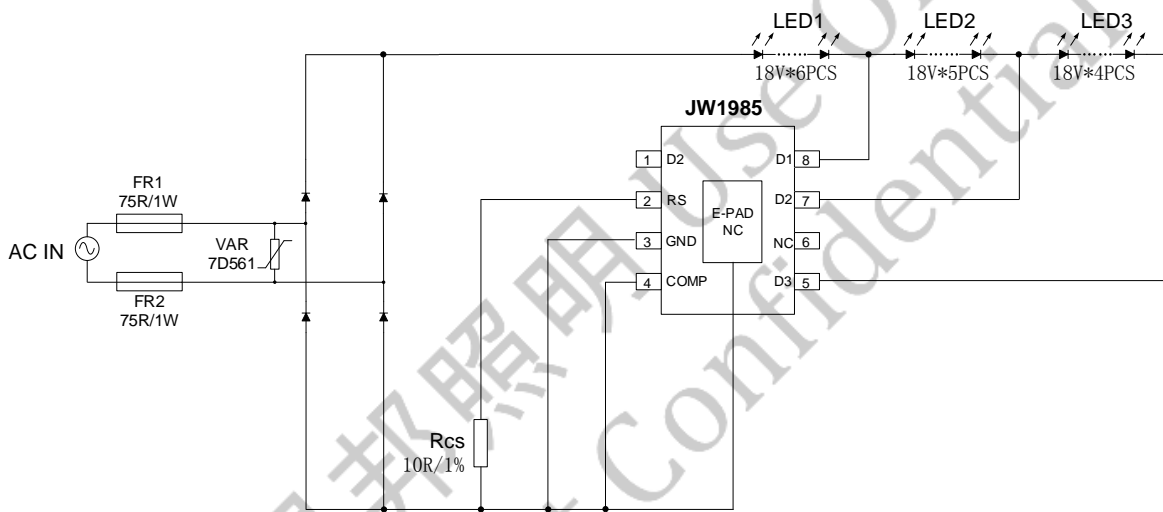

REFERENCE DESIGN

Note: Information in the following reference design sections is not part of JoulWatt component specification. Customers are responsible for determining suitability of components chosen for their purposes and should validate their design implementation to make sure the proper system functionality.
